

## XMF Workflow

### PRODUCT BROCHURE

Intelligent workflow technology for today  
and tomorrow

## XMF Workflow

**Workflow is a crucial function at the heart of any print operation, whether offset, digital or a combination of both. XMF Workflow is a powerful and flexible production hub that is built around PDF and JDF technologies to offer a rich set of capabilities in pre-flighting, colour management, imposition and screening for a variety of output devices that include platesetters, digital presses and Fujifilm's Jet Press 720 digital inkjet press.**

One of the most comprehensive workflow platforms for managing integrated production, XMF Workflow has been designed to meet the production demands of sheetfed, web and digital print companies. Based on Adobe's PDF Print Engine (APPE), XMF Workflow has from its inception led the way in combining the creative depth of Adobe's Creative Suite applications with streamlined print production. XMF Workflow brings together Fujifilm's expertise in colour, imposition and workflow production to allow printers to increase efficiency and productivity while maintaining high quality production at all times.

### Built for speed and efficiency

XMF Workflow has tools to improve efficiencies throughout your business, handling complex PDFs with ease. Using Fujifilm's 'Pure PDF' implementation of the Adobe PDF Print Engine, XMF Workflow ensures that supplied files can be processed extremely quickly. And, because XMF Workflow uses the latest Adobe technology, keeping up with applications is easy.

### Built for automation and flexibility

Although easy to use, with a 'one screen' production window, XMF Workflow provides complete control and flexibility in production. And, with its JDF foundation, XMF Workflow is able to link easily to MIS systems, reducing job preparation time as well as providing real time cost data. All the functions you would expect in a workflow are

available in XMF Workflow – pre-flighting, trapping, and of course colour management, all alongside Fujifilm's advanced imposition functions.

### Built for digital and offset

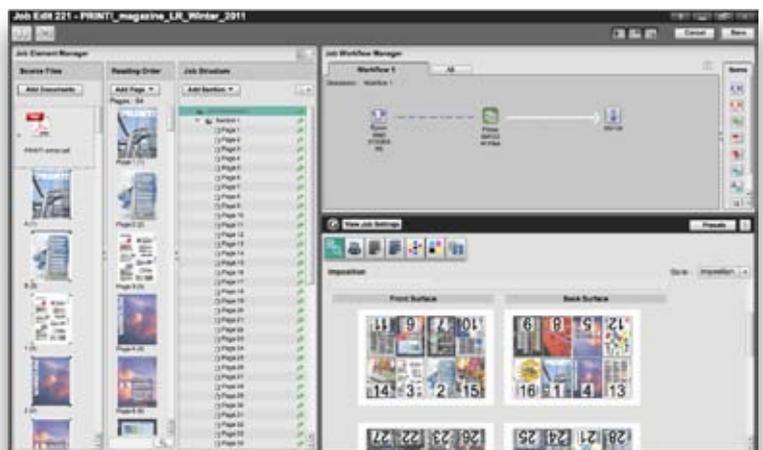

The XMF Workflow suite of solutions provides true cross-media capability. With the ability to prepare a PDF for either CTP or digital output at the click of a mouse, XMF Workflow automatically applies the appropriate imposition, colour management and screening settings, maintaining data integrity and colour consistency throughout. XMF Workflow also allows for sections to be output to digital presses for proofing purposes.

### Built to help you add value

Adding new services is key to retaining and gaining business. XMF Workflow enables you to create 3D digital mock-

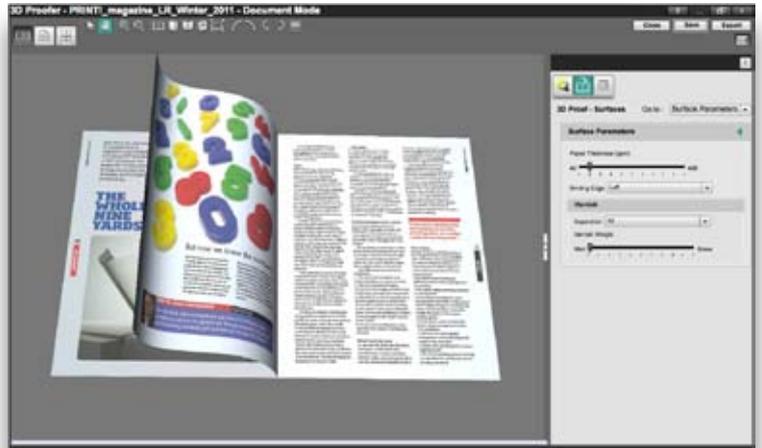

XMF Workflow supports both offset and digital presses, including Fujifilm's Jet Press 720 B2 inkjet model.

The 'one screen' interface allows the user to define proofing and printing workflows, to view job content and structure and to set up and preview impositions.

ups, complete with the ability to turn virtual pages in the viewer, showing the effects of different paper types, and allows you to send these as stand-alone 3D virtual proofs to clients. The 3D mock-ups are created from APPE-rendered pages and the production imposition scheme and are therefore as close a representation of the printed product as you can get without actually putting ink on paper. Also, the optional XMF Workflow Remote module adds powerful web browser-based online job submission, previewing, annotation and approval. This enables you to expand the range of remote services you offer your customers, speeding up job hand-off, review, correction and sign-off.

The 3D proof in XMF Workflow is created from the JDF imposition and rendered production files, giving the most accurate preview of content and form.

### Built to reduce costs

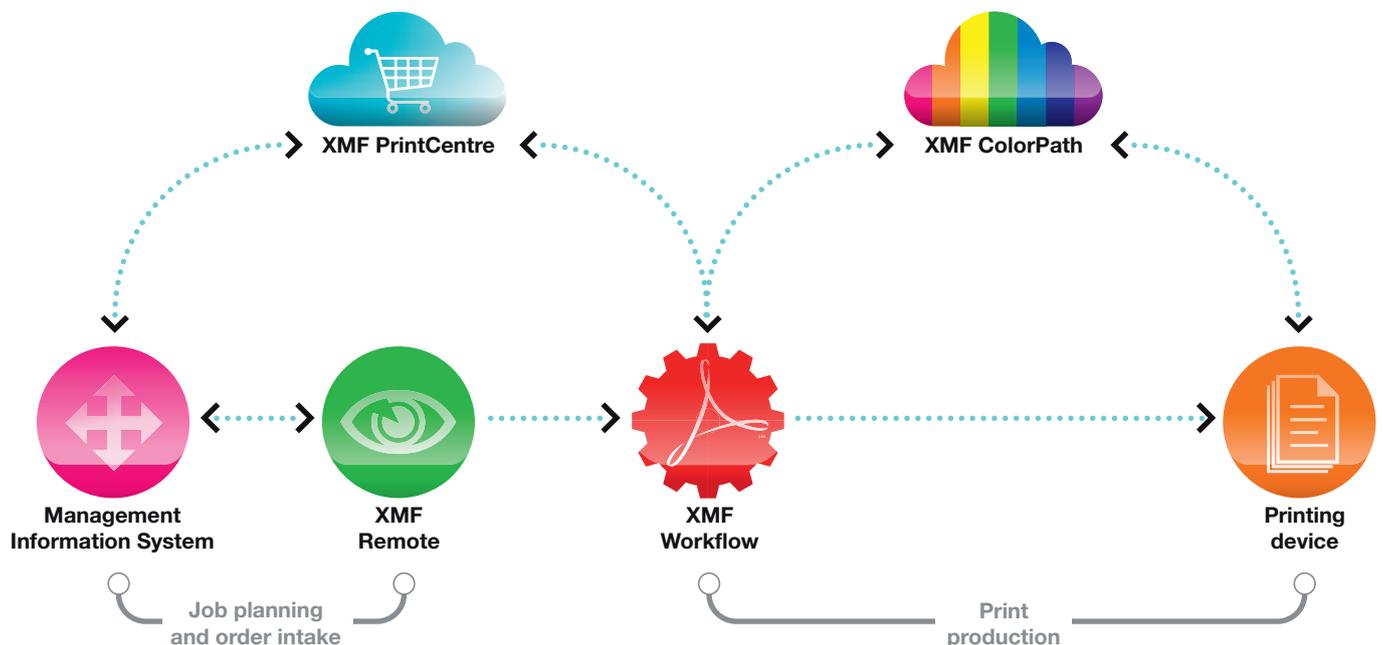

Not only does XMF Workflow increase efficiency, it can actually reduce costs. Its intuitive, easy-to-use interface requires very little training, saving time and money. And, its support for unlimited Mac and PC workflow clients allows unlimited imposition clients without having to pay for additional user licences.

### Built to last

Because XMF Workflow is built exclusively around the latest-generation APPE using Fujifilm's 'Pure PDF' approach, it is considerably more efficient at handling the increasingly complex PDF files that both current and future creative applications will produce. This is complemented by integral JDF support, which delivers enhanced communication between applications,

pre-press, press and finishing equipment as part of an information-rich production environment, bringing full visibility of job progress and costs. XMF Workflow is also highly scalable, with the ability to add multiple additional servers to support growing production facilities or customer demand. Together, these factors make XMF Workflow a sound investment in the future of your print production.

*XMF Workflow sits at the heart of the XMF workflow and production suite, integrating with MIS, web-to-print via XMF PrintCentre, XMF Remote for online review and approval and XMF ColorPath cloud-based colour management.*

## XMF Workflow at a glance

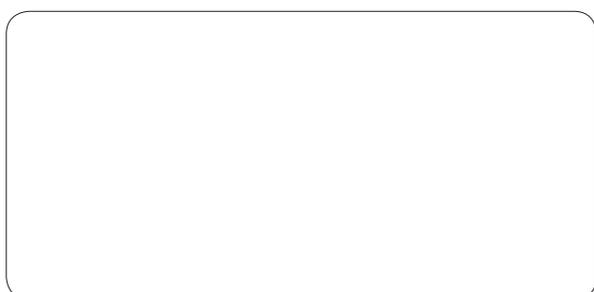

XMF Workflow combines key industry-standard and Fujifilm-specific technologies to deliver a comprehensive workflow with a wide range of advanced capabilities as standard. Key components and capabilities of XMF Workflow include:

<b>Adobe PDF Print Engine</b>	XMF Workflow is based on Adobe's native PDF rasteriser, which is capable of rapidly processing the most complex PDFs with ease
<b>Pre-flighting</b>	XMF Workflow can pre-flight and automatically correct common PDF errors as files enter the system
<b>Colour management</b>	XMF Workflow incorporates advanced standalone colour capabilities and XMF ColorPath Organizer, a gateway to the XMF ColorPath cloud-based colour management system.
<b>XMF Workflow InkSave*</b>	XMF Workflow includes the ability to create ink-saving device-link profiles within the workflow
<b>Trapping</b>	XMF Workflow employs Adobe in-RIP trapping for automatic application of advanced trapping optimised for each output device
<b>XMF Workflow Impose</b>	XMF Workflow applies sophisticated imposition as appropriate for digital, sheet-fed and web offset printing
<b>Section proofing</b>	XMF Workflow offers the ability to use digital presses to create physical mock-ups of offset print jobs
<b>3D proofing</b>	XMF Workflow can generate 3D proofs from APPE RIPped data that can simulate different stock, finishing and folding options
<b>JDF Connect*</b>	XMF Workflow provides an open interface to MIS systems that allows automatic job creation directly from MIS
<b>DFE JDF integration</b>	XMF Workflow supports open connectivity with the digital front-ends for a variety of digital print systems
